

FAQ

1) What is 4castmarket?

4castmarket aims to become one of the top prediction markets in the world, while giving users permissions to propose events. Currently, we are starting by partnering with Azuro protocol to provide initial liquidity but in the future after acquiring users we plan to create a P2P outcome trading layer for additional events, not provided by Azuro protocol.

2) What makes 4castmarket different?

4castmarket aims to combine the liquidity trees of the Azuro Protocol and the secondary P2P trading market for additional events and liquidity, leading to the possibility of a wide range of events along with higher user adoption and liquidity.

3) Where can I buy \$4cast token (\$4CT)?

The presale is currently ongoing at the top of this website. Simply connect a BnB wallet such as MetaMask to the Radom widget and swap for BnB or USDT to complete the purchase to receive \$4cast in your wallet.

4) Why can't I see \$4cast (\$4CT) in my wallet?

Copy the official contract address –
0xA4f3B5adC7825b792f832ab199bcd9C77a647D9f – and use the ‘**Add Token**’ or ‘**Import Token**’ functions within clients like MetaMask.

5) Where do I contact support?

If you have any questions or need assistance, please join our telegram channel and a moderator will attend to your queries. Please do not respond to any unsolicited DMs in the telegram group.
